Beamer⁺ is a lightweight web app that enhances static slides with embedded media, real-time drawing tools, intuitive navigation, and a suite of powerful presentation features.

videos/audio

supported formats include .mp4, .mov, .mpeg, .mp3, .wav

example usage: demonstrating Newton's 2nd law in a Physics course

gravitational acceleration is
independent of mass

models

supported formats include .glpb

example usage: explaining blood flow through the heart in an Anatomy course

blood flow through the heart
(deoxygenated blood / oxygenated blood)

split view

allows two slides to be shown simultaneously

example usage: explaining Taylor series in a Calculus class

Any smooth function f can be approximated around $x_0 = 0$ as:

$$f(x) = \sum_{n=0}^{\infty} \frac{f^{(n)}(0)}{n!} x^n$$

try using
split view!

expansion of $f(x) = \sin(x)$ around $x_0 = 0$

widgets

supported formats include `.html`

example usage: explaining latches in a Computer Organization class

A **latch** stores one bit of state using cross-coupled gate feedback.

cross-coupled NOR gates
inputs are *active-high*

S	R	Q	$\bar{Q}$	state
0	0	Q	$\bar{Q}$	hold
1	0	1	0	set
0	1	0	1	reset
1	1	0	0	forbidden

truth table for an SR latch
implemented with NOR gates
